PROJECT

INTERNET OF THINGS

Solar Sea-Based IOT Remote Monitor

Stock Maintenance System - Software Application

The Stock Maintenance System is a software application designed to manage inventory, customer details, and user logins. Developed in NetBeans with a backend powered by XAMPP, it stores and processes data efficiently, providing an easy-to-use interface for businesses to track stock and customer information

Web Development - E-commerce Site(ElectroGame)

The project is currently ongoing and not yet completed, with a focus on creating a front-end e-commerce website for gaming products and other electronic devices, offering a user-friendly interface and seamless browsing experience.

Salesforce: TripAdvisor E-Management

Created a Salesforce project called "TripAdvisor E-Management" to manage travel-related tasks. Built features for handling data, automating workflows, and improving user experience.
